

User Guideline for Phantom Shield Extension

1. Overview

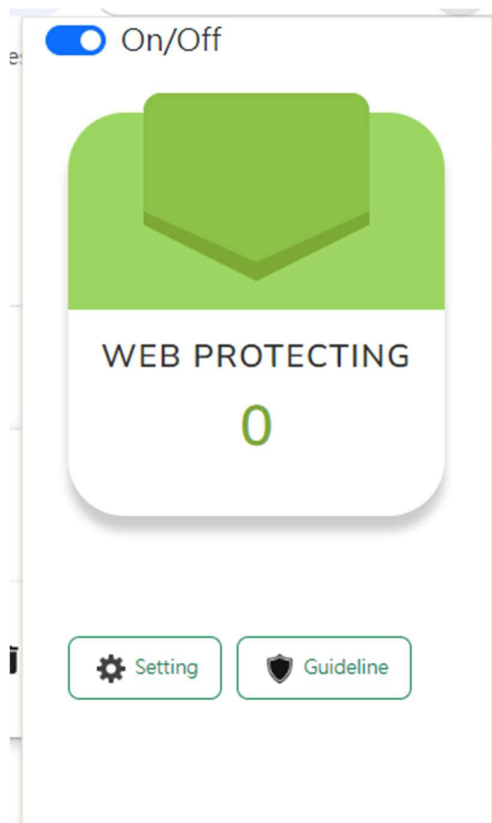

This Phantom Shield Extension helps protect you from unsafe websites by scanning web pages and notifying you if they are risky. The extension also provides a toggle to turn protection on or off and offers customization settings to meet your specific needs.

2. Main Features

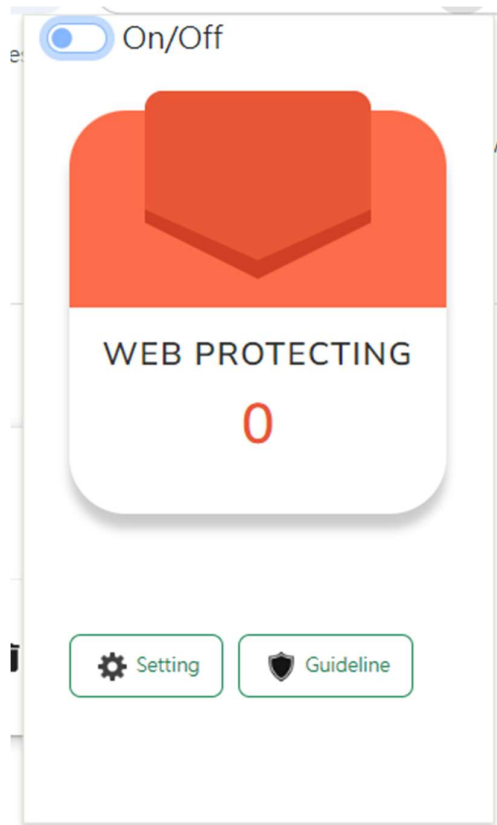

2.1 Protection Status (Web Protecting)

- **Web Protecting Indicator:** This displays the current protection status and activity level. The number displayed represents how many times the web protection has been successfully executed. The protection status may vary:

- **Green Shield:** Protection is active.

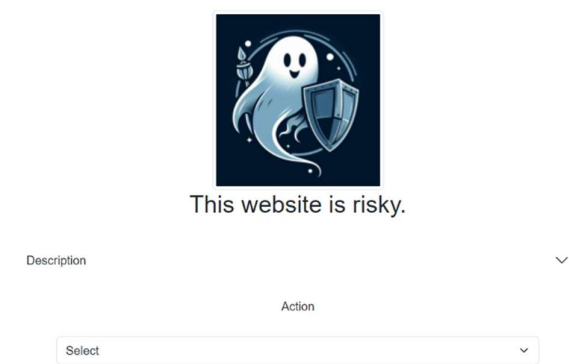

- **Red Shield:** Protection is inactive

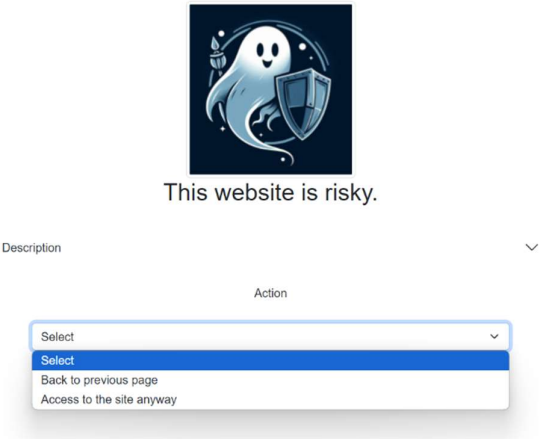

- **On/Off Toggle:** At the top left, you can enable or disable web protection by toggling this switch. Blue indicates "On," while white indicates "Off."

2.2 Warning Page (Risky Website Notification)

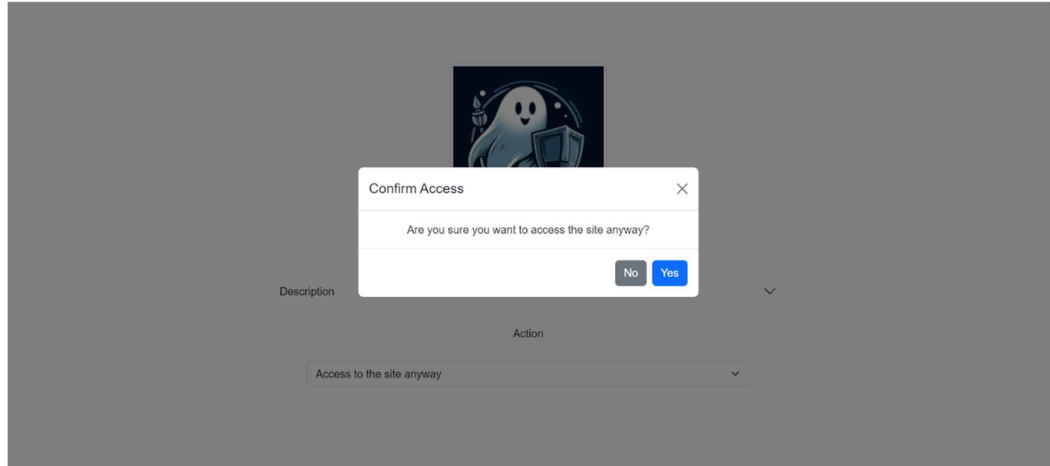

- If a website is flagged as risky, the extension will show a warning page, preventing you from continuing to the site without acknowledging the risk.

- **Actions on Risky Website:**
 - **Back to Previous Page:** Return to the last visited page.

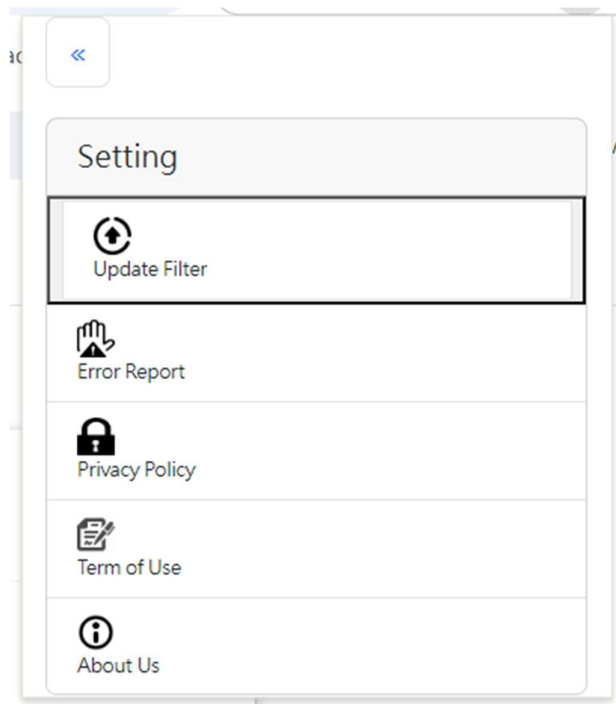

- **Access the Site Anyway:** You can override the protection and proceed to the site, but it is not recommended unless you are sure of the site's safety.

3. Settings Panel

- Click the **Setting** button to configure the extension to your needs. Available options include:
 - **Update Filter:** Ensure that the extension's filter is updated to the latest protection database.

- **Error Report:** Report any false positives or issues to help improve the extension.

- **Privacy Policy:** Review the extension's privacy policies.
 - **Terms of Use:** Understand the terms you agree to by using this extension.
 - **About Us:** Learn more about the extension developers and their mission.
-

4. Guidelines for Using the Extension

1. **Enable Protection:** After installing, turn on the protection using the toggle switch at the top of the extension window.
 2. **Monitor Protection Status:** Keep an eye on the protection indicator. If the number count increases by more than one, it means the browser has made more than one request to this dangerous page.
 3. **Respond to Warnings:** If you receive a warning that a site is risky, you can either return to a previous page or proceed with caution by selecting the appropriate action.
-
